

Your data. Your AI. Your environment.

PKG Systems builds private AI data platforms for mid-market companies — packaged, run by us, owned by you.

Aggregate your data from every system into a Kubernetes environment we design exclusively for you, with AI tools your team uses to analyze it. Nothing leaves your environment. Ever.

One cluster per customer.

A Kubernetes cluster designed and operated for one customer. No multi-tenant SaaS hiding behind a "private" label, no shared databases, no shared model endpoints. Your data is isolated by architecture, not by a vendor's privacy policy.

AI on your data, in your environment.

Retrieval, agents, conversational analysis — all running against models we deploy in your cluster, indexes we build from your data. Nothing ships to a public LLM. Nothing trains a shared model. The prompts are yours; the rows are yours.

Take it with you if you leave.

Standard upstream Kubernetes, standard Postgres, standard everything. Source code in your repository under a perpetual license. Documentation in your hands. If you ever leave PKG, the platform keeps working.

WHAT A PACKAGED ENGAGEMENT COVERS

- **Source connectors** REST APIs, databases, file drops, webhooks — every system you run, ingested incrementally and idempotently.
- **Admin tooling** Operations console for the platform itself — monitor sync, manage users, run migrations, audit activity.
- **Migration tooling** Engines (not scripts) for moving data between systems when a vendor swap, M&A, or sunset hits.
- **Canonical data store** Postgres-backed, modeled to your business, designed for both reporting and AI retrieval.
- **AI integration layer** Retrieval against your data, agents that act in your systems, conversational analysis — on models deployed in your cluster.
- **Ongoing operation** We run the cluster, patch the software, respond to incidents, ship enhancements. Monthly run-rate; no pay-per-incident.
- **Reports & dashboards** Live SQL views surfaced through a web UI; CSV export; role-aware access.

HOW AN ENGAGEMENT RUNS

DISCOVERY

Fixed-price, typically 2-4 weeks. We map your data sources, talk to your team, and produce a written architecture and a fixed-price build estimate. You own the document either way.

BUILD

Fixed-price implementation against the Discovery deliverable. No hourly billing, no scope expansion without written sign-off. Working software at the end of every two-week iteration.

RUN

Monthly run-rate covering the cluster, database, application, and integrations. Enhancements within an agreed envelope. Cancel with 60 days' notice; we hand the system over.

BUILT FOR MID-MARKET COMPANIES WHO'D RATHER OWN THE PLATFORM

PKG is for **mid-market operators**

(\$20M-\$500M revenue) who have outgrown spreadsheets, lost patience with SaaS analytics, and don't want to hire a 30-person IT department. The fit is strongest when:

- You run more than three operational systems that should be connected and aren't.
- You have a strong instinct that your data is **yours** and shouldn't live in someone else's cloud.
- You've been quoted by a Big 4 firm and walked away.
- You've tried to "just use" a SaaS analytics product and hit its ceiling within six months.
